ROAD MAP

- **SORTING**
 - Preliminaries
 - Insertion sort
 - Selection sort
 - Bubble sort

Preliminaries

- The algorithms will all be exchangeable.
- Each will be passed an array containing the elements.
- We will also assume the existence of the "<" and ">" operators.
- Sorting under these conditions is known as *comparison-based* sorting.

Insertion Sort

Original	34	8	64	51	32	21	P. Moved
----------	----	---	----	----	----	----	----------

After $p = 1$	8	34	64	51	32	21	1
---------------	---	----	----	----	----	----	---

After $p = 2$	8	34	64	51	32	21	0
---------------	---	----	----	----	----	----	---

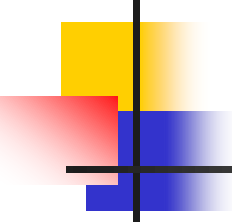

After $p = 3$	8	34	51	64	32	21	1
---------------	---	----	----	----	----	----	---

After $p = 4$	8	32	34	51	64	21	3
---------------	---	----	----	----	----	----	---

After $p = 5$	8	21	32	34	51	64	4
---------------	---	----	----	----	----	----	---

```
def insertion_sort(a):  
    for p in range(1, len(a)):  
        tmp = a[p]  
        j = p  
        while j > 0 and tmp < a[j - 1]:  
            a[j] = a[j - 1]  
            j -= 1  
        a[j] = tmp
```

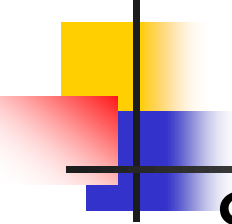

```
//Insertion sort routine
```

3 cases in algorithms

There are 3 cases
when study in algorithms.

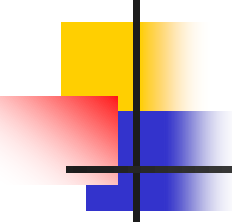

- Best Case
- Worst Case
- Average Case

Selection sort

Selection Sort is a simple comparison-based sorting algorithm that works by dividing the input list into two parts: the sorted part and the unsorted part.

The algorithm repeatedly finds the minimum element from the unsorted part and swaps it with the first element of the unsorted part. This process is repeated until the entire list becomes sorted.

Selection Sort

Original	64	25	12	22	11	min_idx	swap
----------	----	----	----	----	----	---------	------

For i=0,j=4	11	25	12	22	64	4	1
-------------	----	----	----	----	----	---	---

For i=1,j=4	11	12	25	22	64	2	1
-------------	----	----	----	----	----	---	---

For i=2,j=4	11	12	22	25	64	3	1
-------------	----	----	----	----	----	---	---

For i=3,j=4	11	12	22	25	64	3	0
-------------	----	----	----	----	----	---	---

For i=4,j=4	11	12	22	25	64	4	0
-------------	----	----	----	----	----	---	---

```
def selection_sort(arr):  
    n = len(arr)  
    for i in range(n):  
        min_idx = i  
        count = 0  
        for j in range(i + 1, n):  
            if arr[j] < arr[min_idx]:  
                min_idx = j  
  
        if min_idx != i:  
            temp = arr[i]  
            arr[i] = arr[min_idx]  
            arr[min_idx] = temp  
  
//Selection sort routine
```
